Just more strangeness in the results then, I guess.

Mike has decided to decon the dump truck in the morning and get clean dirt from the hill to finish filling in the excavation so Steve can get out on it and sample. It's pretty muddy and that will fix the problem.

2nd and 3rd water samples from treated totes came back dirty. Aparantly higher flow rates and/or mud affect the ability of the carbon to treat. Mike wants to try re-treating at slower rate with 2nd 55-gal carbon unit.

I'm going to try to have the walk through for the expanded sampling grid (row 8) tomorrow morning.

The lab thought it was odd also, but they verified that it is the correct Aroclor.

Regards,
Teresa

Need to ask the lab to confirm results for A5 8-12. They reported 4.46 ppm Aroclor 1016. Only sample we've seen this Aroclor.
